

# manage default content of public catalog welcome screen

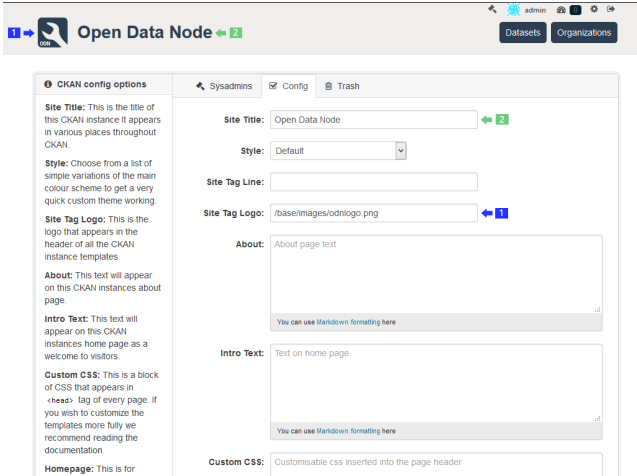

Who can do this (User role) ODN Administrator

## Description

I want to change content of the welcome screen in the public part of ODN (i.e. public catalogue).

## How to do it:

- Login as administrator (user `admin`) into public catalog at `http://<hostname>/user/login` (where `<hostname>` is name /FQDN of your ODN server)`
- Select `Sysadmin settings` ("hammer" icon in top-right part)
- Select "Config" tab
- Change "Site Title" (1), "Site Tag Logo" (2), "About", "Intro Text", etc. as needed
- Submit (`Update Config`)

The screenshot shows the Open Data Node (ODN) Sysadmin settings page, specifically the Config tab. The page is titled "CKAN config options" and has a navigation bar with "Sysadmins", "Config", and "Trash" tabs. The "Config" tab is active. The page contains several configuration options:

- Site Title:** This is the title of this CKAN instance. It appears in various places throughout CKAN. The value is "Open Data Node".
- Style:** Choose from a list of simple variations of the main colour scheme to get a very quick custom theme working. The value is "Default".
- Site Tag Line:** A text input field.
- Site Tag Logo:** This is the logo that appears in the header of all the CKAN instance templates. The value is "/base/images/odnlogo.png".
- About:** About page text. The value is "About page text".
- Intro Text:** Text on home page. The value is "Text on home page".
- Custom CSS:** Customisable css inserted into the page header. The value is "Customisable css inserted into the page header".

Each text input field has a "You can use Markdown formatting here" note below it. The "Site Title" and "Site Tag Logo" fields have a green "2" icon next to them, and the "Site Tag Logo" field has a blue "1" icon next to it.
