

# synchronize catalog record manually with external catalogs

Who can do this (User role) Data Publisher

## Description

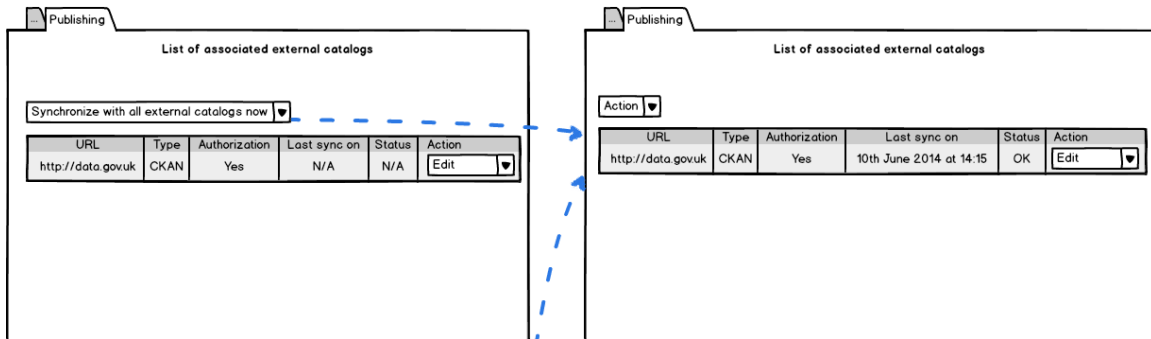

I want to synchronize the catalog record of a dataset with all external catalogs associated with the dataset.

## Preconditions

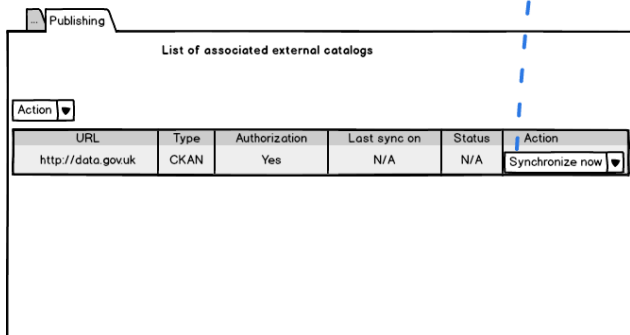

- at least one publicly available catalog record exists
- at least one external catalog is defined and associated with the publicly available catalog record

## How to do it:

- clicks on publicly available dataset 'Name' in the list of internal catalog records
- clicks 'Manage' button
- selects 'Publishing' tab
  - the list of associated external catalogs is displayed
- selects 'Synchronize with all external catalogs now' from 'Action' combo box
  - catalog record is replicated to all catalogs in the list of associated external catalogs instantly
  - 'Last sync on' is updated with current date and time for each external catalog in the list
  - 'Status' is updated for each external catalog in the list according to the result of replication process, it takes following values:
    - OK - synchronization with external catalog was successful
    - FAILED - synchronization with external catalog was not successful
- or selects 'Synchronize now' from Action combo box for a selected external catalog
  - catalog record is replicated to selected associated external catalog instantly
  - 'Last sync on' is updated with current date and time for each external catalog in the list
  - 'Status' is updated for each external catalog in the list according to the result of replication process, it takes following values:
    - OK - synchronization with external catalog was successful
    - FAILED - synchronization with external catalog was not successful
